This event will help you create your strategy for Corporate Performance Management and Business Digital Transformation based on data that provides objectivity and analysis tools for reliable insights required to understand how to leverage KPIs monitoring and process mining to discover and prioritize optimization efforts.

Digital Transformation is a hot topic for most of the organizations today. The event will address :

- How **Execution Premium Process** Methodology will help organization for Strategy Implementation
- What is a **Digital Twin of an Organization** (DTO) and what are its benefits
- How a data-driven approach gives you an edge in digital transformation
- How to measure digital transformation success

You will also see Demonstrations for KPIs Monitoring and Process Mining and how to apply it in practice through customer cases:

- How to successfully implement Corporate Performance Management systems
- How to utilize process mining, as the compass for Digital Transformation
- How to find process bottlenecks with process mining
- Where is the biggest benefit potential in processes

- How to combine high service levels and lean processes to increase profitability

This event, can help you to better understand the full potential of QPR Business Operating System QPR ProcessAnalyzer Tool.

We are looking forward to share our experience and also listen of your plans for Strategy Execution and Digital Transformation.
